

Refrigerator Energy Efficiency Labelling Training – Denmark

A delegation from South Africa led by Iqshaan Alladin (SABS Regulatory Affairs), comprising of Maphuti Lekgodi (DME), Katima Temba (SABS Regulatory Affairs), Lawrence Kuisis (Test Africa), Hennie Prinsloo (Gerotek), Isaac Mabena (SABS Commercial) and Francois du Toit (SANAS), completed a refrigerator energy efficiency labelling programme during April 2005. The programme was hosted by COWI, in a cold but beautiful Denmark.

The successful completion of this training programme lays the foundation for the establishment of a regulatory framework, having achieved the appropriate capacity and competency levels that serves to give effect to South African's Energy Efficiency Strategy, with respect to refrigerators. South Africa is now strategically positioned to launch its refrigerator energy efficiency labelling programme, to meet the industry's needs and educate all South Africans to change refrigerator purchasing and utilisation behaviour.
